PROFESSIONAL SUMMARY

Cloud Security Engineer with hands-on ownership of production AWS infrastructure, cloud security architecture, IAM governance, infrastructure-as-code, Kubernetes workloads, CI/CD security, and observability for a HIPAA-regulated healthcare platform. Designs and implements least-privilege IAM/RBAC controls, Terraform-based security automation, secure deployment architectures, and production monitoring across cloud, application, and data layers. Experienced in site reliability engineering for the production environment, including SLO/SLI definition, capacity planning, configuration-drift remediation, incident management with blameless postmortems, and reliability engineering for scalable, fault-tolerant systems. Proficient in Python and shell scripting, with growing hands-on development in Go for reliability automation and ai tools that accelerate detection and triage.

EDUCATION

Pace University Master's, <i>Computer Science</i>	Sep 2022 - May 2024 GPA: 3.91/4.0
Savitribai Phule Pune University Bachelor's, <i>Computer Engineering</i>	Aug 2018 - Jul 2021 GPA: 3.2/4.0

SKILLS

Cloud Security & Identity: AWS IAM, Least-Privilege Access, RBAC, Access Governance, SAML, OAuth 2.0, OpenID Connect, Authentication & Authorization, IAM Database Authentication, CloudTrail, Security Controls

Infrastructure as Code: Terraform, Terraform Modules, Terraform State & Configuration Management, CloudFormation, Infrastructure Standardization, Configuration Drift Detection & Remediation

DevSecOps & CI/CD: GitHub Actions, Jenkins, GitLab CI, CI/CD Security Gates, Vulnerability Scanning, API Security Testing, Automated Rollbacks, Deployment Controls, Security-as-Code

Containers & Platform Security: Docker, Kubernetes, Amazon EKS, Kubernetes RBAC, Network Policies, Helm, Container Security, Resource Management, Workload Isolation

Observability & Reliability: Prometheus, Grafana, Loki, Mimir, ELK Stack, CloudWatch, SLOs, SLIs, Error Budgets, Alerting, Incident Management, On-Call, Capacity Planning, Incident Response, Root-Cause Analysis, Blameless Postmortems, MTTR/MTTD

Security Engineering & Compliance: HIPAA-Aligned Infrastructure, NIST Cybersecurity Framework, Security Baselines, Vulnerability Management, Audit Readiness, Access Governance, Configuration Compliance, Security Incident Response

Programming & Automation: Python, Go, C, Boto3, Bash, REST APIs, PostgreSQL, MySQL, Query Optimization, Data Structures & Algorithms, Debugging, Performance Profiling, Security Automation

WORK EXPERIENCE

Woodhull Rx Center Cloud Security Engineer	Jan 2025 - Present
- Owned site reliability engineering for a HIPAA-regulated pharmacy production environment on AWS, aligning feature velocity with reliability via defined SLIs/SLOs and error-budget driven priorities. - Architected and executed a zero-downtime migration of a HIPAA-regulated pharmacy platform to AWS, deploying parallel production infrastructure and performing a blue-green cutover through Route 53 while supporting 400 to 500 daily eRx transactions. - Established Terraform-driven infrastructure standardization across dev, stage, and production, enforcing environment parity and eliminating configuration inconsistencies that previously created recurring compliance exposure. - Designed highly available, scalable, fault-tolerant systems for the eRx platform using multi-AZ RDS, automated failover, and recovery runbooks, improving resilience during infrastructure events.	

- Hardened production database security and availability through encrypted RDS replication, automated failover, IAM database authentication, and short-lived IAM-issued database credentials, eliminating reliance on static database passwords.
- Diagnosed recurring Kubernetes and container crash loops by debugging resource-limit and request configuration, then rearchitected the eRx processing pipeline for parallel execution, reducing application latency by approximately 35% while preserving data-integrity controls.
- Refactored monolithic Terraform infrastructure into peer-reviewed, least-privilege modules covering networking, compute, IAM, and security groups, reducing configuration drift by approximately 40% and addressing recurring audit findings caused by manual infrastructure changes.
- Built and operated an SRE-grade observability stack (Prometheus, Grafana, Loki, Mimir, CloudWatch) with actionable alerts and service dashboards, reducing incident frequency by approximately 30% and MTTR by approximately 40%.
- Drove incident management and a blameless postmortems culture, owning on-call response, root-cause analysis across cloud, application, and data layers, and tracking corrective actions to closure while maintaining SLA-level reliability.
- Partnered with application engineers on release procedures and safer rollouts (canary and blue-green patterns), improving change safety while meeting uptime requirements in a regulated environment.

Filmy AI | Associate Cybersecurity & QA

Oct 2024 - Jul 2025

- Built reliability-focused CI/CD guardrails, adding rigorous testing and release procedures (staged rollouts, automated health checks, and rollback) to keep high-change services stable.
- Integrated shift-left security controls directly into CI/CD workflows, enforcing automated vulnerability scanning and API security validation as build gates covering OAuth 2.0/OIDC, SAML-based authentication and authorization, input validation, and encryption controls.
- Architected a serverless malware detection and quarantine pipeline using GCP Cloud Run and ClamAV, automatically scanning uploaded media and preventing malicious files from reaching production storage.
- Performed distributed systems troubleshooting across event-driven services (webhooks, queues, and storage), isolating failure modes such as retries, duplication, and backpressure, and implementing mitigations to reduce incident recurrence.
- Led technical incident response for a data-exfiltration event caused by a misconfigured third-party webhook, performing exposure analysis, containment, remediation, and secure-data-handling restoration within 24 hours.
- Strengthened application security assurance by integrating authentication, authorization, vulnerability detection, and security validation into the software delivery lifecycle, reducing the reliance on post-deployment security discovery.

Bunchful Enterprise | Cyber Security Intern

Mar 2024 - May 2024

- Supported production support readiness by building an asset inventory, documenting operational baselines, and validating endpoint compliance against defined security controls.
- Established the organization's initial security governance foundation, authoring security policies and baseline standards aligned with the NIST Cybersecurity Framework.
- Implemented asset inventory and endpoint compliance validation against defined security baselines, identifying configuration and control gaps for remediation.
- Supported vulnerability assessment, threat research, and risk-register development, translating technical findings into actionable security and governance requirements.
- Strengthened fundamentals in UNIX and networking (processes, system logging, TCP/IP basics) to better support incident triage and root-cause analysis in production systems.

PROJECTS

Automated IAM Governance & Configuration Drift Detection Engine

- Engineered an automated IAM governance platform that evaluates AWS IAM policies and access configurations against least-privilege baselines to identify excessive permissions and configuration drift.

- Implemented continuous access-governance validation, CloudTrail-based monitoring, real-time SNS alerting, and audit-ready reporting, replacing manual IAM reviews with automated security controls.
- Added a lightweight anomaly-scoring workflow to prioritize risky access changes, an ai tools-style triage layer that reduced alert noise and sped up investigation queues.

Secure CI/CD & Infrastructure Automation Pipeline

- Engineered a security-focused CI/CD pipeline integrating source validation, Terraform plan/apply workflows, approval gates, container deployments, and automated rollback controls.
- Embedded infrastructure and deployment validation into the software delivery lifecycle, preventing misconfigurations from progressing through deployment workflows.

Serverless Malware Detection & File Quarantine Pipeline

- Designed an event-driven malware detection and quarantine architecture using AWS Lambda and ClamAV to automatically scan uploaded media before allowing clean content to reach S3.
- Implemented automated quarantine and SNS-based security alerting to isolate malicious uploads and reduce the attack surface associated with user-generated content.

SAMYA — Cloud-Native Health Management Platform (Personal Project)

- Architecting a cloud-native health management platform that brings medication tracking, wellness, health readings, prescriptions, reports, nutrition, hydration, exercise, women's health, and health records into a unified platform.
- Engineering secure REST APIs and role-based access controls (RBAC) with encryption and audit logging to protect sensitive health information and maintain traceability across user workflows.
- Developing an AI-powered wellness experience designed to help users understand health patterns, build healthier habits, and receive personalized lifestyle guidance from their health data.
- Containerizing the application with Docker and designing the platform around security, privacy, and healthcare data-protection requirements aligned with HIPAA and DPDP principles.

CERTIFICATIONS & ACHIEVEMENTS

• AWS Certified Cloud Practitioner - Amazon Web Services (AWS)	Jul 2024
• CompTIA Security+ - CompTIA	Jun 2025
• AWS Certified Solutions Architect – Associate - Amazon Web Services (AWS)	Aug 2025
• HashiCorp Certified: Terraform Associate (004) - HashiCorp	Jun 2026
